If you want to learn about the original AutoCAD app back in 1982, check out the early AutoCAD books. Today, almost 3 million people worldwide have access to AutoCAD software on their desktop, in the cloud, or on mobile devices. These people rely on AutoCAD to design and draft three-dimensional (3D) components, drawings, and models, whether they're internal to a company or used in a creative collaboration with a client or customer. For a cad design user, the set of capabilities available in AutoCAD is rather vast, covering virtually all aspects of the drafting process and the core design and drafting concepts. That breadth of features, combined with the wealth of tools that make up the interface, have made AutoCAD an essential tool for both beginners and experts. In fact, Autodesk's comprehensive, multi-functional AutoCAD design software is regularly cited as a top app or platform by various industry analyst firms and publications. This article provides an overview of AutoCAD 2019. Key Features There are a wide range of features available in AutoCAD. Some of them can be found in other applications and others are unique to the tool. Automated command functions Automated command functions (ACFs) are a set of customisable functions built into the application's interface to make the basic design process easier and more efficient. Using a set of quick keystrokes or mouse clicks, a user can perform a wide range of tasks with AutoCAD without having to leave the drawing and move from one window to the next. Often AutoCAD functions are not limited to a single window. In many cases, they can be run in any view or design space. Here are the most common ACFs: Draw Lines In addition to the

---

standard Line object, AutoCAD allows the user to draw lines and shapes with various lengths, thicknesses, and types. In addition to the traditional Line object, the user can draw circles, ellipses, arcs, and segments with a variety of gradients, fills, and colours. Draw freehand curves The Draw Curves object allows the user to draw lines that curve, flex, and bend in all directions. The new multi-bezier curves let you create complex curves with more control. They make it easier to insert, edit, and refine curved shapes, and to ensure the curves

Category:Companies established in 2003Q: Override Web API CacheControl when using HttpClient I am implementing a small web API service using OWIN (with .NET Framework 4.6) that will be accessed via a mobile application. I'd like to implement the following caching behavior, but I'm not sure how to do it. When a user makes a request to the service, I want to cache the response, so that if the same user makes the same request again (in the same session), they receive the cached response instead of waiting for the service to be called again. My strategy is to override the HttpClient that is instantiated by the OWIN pipeline. In this case, the HttpClientFactory is inherited from OwinCachingClientFactory and the base class overrides the GetCacheControl method to cache the responses: public override ICachePolicy GetCachePolicy(HttpContext context) { var policy = new CachePolicy(); // Cache the response.

```
policy.SetCacheability(HttpCacheability.Public);  
policy.SetExpires(DateTime.UtcNow.AddMinutes(10)); return policy; }
```

I'm wondering if there is a better/cleaner way to do this. I could override the OWIN pipeline and override the AddResponseCookie method to set the

---

expiration date and use that to cache the responses, but that means any API method calls made by the OWIN pipeline have to have the same cookie name and expiration in order to be cached (which is something I would like to avoid). Can anyone suggest a cleaner, more straightforward way to accomplish this caching behavior? A: Override the `HttpMessageHandler` and return a new instance of the `HttpMessageHandler` that will cache the responses.

```
public class CachedMessageHandler : HttpMessageHandler {  
    private readonly IClient
```

#### **What's New in the?**

**Model-driven engineering capabilities:** Save time and improve your drawings with the latest release of the model-driven engineering (MDE) tools. Get the job done by doing it with the help of your drawings. AutoCAD 2023 can automatically create 2D drawings from your 3D models and vice versa. You'll see your model data reflected in the resulting drawings, and you can make changes using those same 2D views. With the new capabilities, you can use 2D views to make model-driven adjustments or you can run in design review mode and create 2D drawings for your team. (video: 3:22 min.)

**Keyboard and mouse support:** Get back to basics with this new release, with support for a complete keyboard and mouse experience, including the ability to control your drawing with the keyboard alone. (video: 1:42 min.)

**Draw attention to what's important:** See items more clearly with the new "pin" feature. In AutoCAD and AutoCAD LT, use the mouse to place pins anywhere on an object or view, drawing surface, text, and web clip, and the pin becomes the first thing that catches your eye. You can even add a pop-up message to draw

---

attention to a specific portion of a drawing. (video: 2:46 min.) Freehand drawing with more precision: With new automatic tool recognition, AutoCAD and AutoCAD LT can recognize straight lines, arcs, circles, and other freehand geometric shapes for drawing. You can also create a variety of freehand curves and splines and even add text or clip to the shape. (video: 1:56 min.) Create and navigate with large drawings: AutoCAD can handle large drawings on a variety of displays, including multiple monitors, including the option to navigate within a large drawing on multiple monitors. (video: 1:10 min.) Up to 1 TB of storage space: See and edit large files in the Cloud. Store your drawings in the cloud, and quickly access them from any device, including the Web or mobile devices. You can view, navigate, and annotate drawings up to 1 TB in size. (video: 2:16 min.) Search and sort large models: Create a searchable workspace of models in the Cloud and share them with your team. Sort your models, annotate
