One of the most important tasks of nursing homes is to improve the quality of care in these institutions. One instrument which can contribute to improving the quality of care is the reduction of pharmaceutical consumption. Our study intends to clarify whether the pharmacy plays a role in reducing the costs of pharmaceuticals in nursing homes. To measure the costs of pharmaceuticals, a retrospective study was conducted at a private German nursing home and a public sector institution for elderly people in Berlin. At the private nursing home, the pharmacy dispensed a total of 5,059 medications for the residents, for an average of 6.1 medications per resident and 5.9 medications per day. The average total cost of all these drugs was determined to be 522.62 Euro per resident per year and 984.40 Euro per resident per day. Medications from hospital discharge were responsible for more than 75% of the total drug costs. The costs of pharmaceuticals in the private nursing home were found to be far below

the average costs of medical care in Germany and in other Western countries. Medications from hospital discharge were the main cause of costs in this institution. The costs of pharmaceuticals in the public institution were much higher and medications from hospital discharge represented only 18% of the total drug costs. In this facility, there were large differences in the costs of pharmaceuticals among the residents. Team Icardi: “De Rossi’s contract with Roma is up in June 2019. My program will have many 'functions' in the form of classes and I want each class to be able to perform functions for example, an 'animation' class that will create an animation between any two 'frames'(animation frames can be as long as you want). Is this possible? if it is, how can I do it? A: Sounds like you're doing the right thing - you should design your classes to serve functions. This might help: I personally prefer to put controls into my user controls, though. That way I can group the functionality of my user controls together and have them all reuse the code from there, instead of creating a bunch of class files just for the sake of it.
