Starting with AutoCAD 2013 Release, 3D Modeling, 2D Drawing, and 3D Graphics, and new functionality was added. This functionality was generally referred to as "Create" commands, and they are now referred to as Build commands. However, there are still many of the original Create commands in use, such as hatch, tracer, glaze, fill, text, textbox, polyline, polygon, arc, arc segment, move, rotate, scale, slide, mirror, project, print, and so on. A separate group of Create commands can be found under the Menus category, such as Create Workspace, Create Network, Create Section, Create Wall, and so on. These commands exist separately from the build commands. The build commands for creating text and hatch are now the Create Text command and the Create Text Hatch command. Other create commands that existed in earlier versions of AutoCAD have been renamed. For example, the 'create text box' command in version 11 of AutoCAD was renamed to 'textbox' in version 2014. A list of the many old create commands that were deprecated in the 2014 release can be found in the Appendix A of the Autodesk Release Notes for 2014 release of AutoCAD. The majority of the older build commands are also now referred to as "create" commands. For example, the 'create wall' command became the 'wall' command in AutoCAD 2014. AutoCAD and similar programs such as MEPIS Architect and OpenSCAD do not have create commands. Instead they have a series of edit commands, such as modify wall or modify section. These are also known as "modify" commands. Command references There are many online resources available to find the original Create command and its function. In addition to the online resources, there are a number of books containing information on AutoCAD which will also refer to the original Create command.
