Sometimes, and we are not saying it is something good, but sometimes it's hard to find a solution or even a description for a particular problem. However, I discovered yesterday evening an application that can solve your problems with its special purpose and is called Toggle All Icons. You can find it at Google code. This is an application designed to toggle all your desktop icons so

that you can see the icons you want to see without any hassle and frustration. While I was browsing on Google code, I found a work in progress of a new application and it's called Toggle All Icons. The new icons are displayed in all Xfce supported display languages and they use the new icon sets from GTK+2. “The fast icons are a great companion for Xfce because they can be used without the Xfce icon theme and with the default Xfce icon set.” say the developers. This is a really great icon set!

Greatly loved icons I guess you can say, this set has the best of the

best. There is not much to complain about, and it has plenty to offer! The icons are very good, they're all screen savers and wallpaper. The fonts are nice and clear, I just wish they were slightly bigger. They are fairly basic, but they do the job. If you are having issues with icons, especially with your DVD or movie icons, then this is the set you are looking for. But seriously

though, I have never had an issue with it, and I've been using it for a while now. My favorite is the background icon because it's just a different and beautiful thing, but they all are great!
