KeyMacro is a handy utility for quickly creating macros, which are easy to record (using the mouse) and very useful in Windows. A Macro is a short sequence of keyboard commands. You can record the sequence of keys you press and define a shortcut for repeating the sequence. The recorded sequence of keys can be then recorded again and again. When you run the macro, it will automatically play your sequence of keys. KeyMacro lets you create custom macros that you can record. You can record only a small portion of the keys you press (up to 20 keys in the current version), and you have the option to only repeat a given sequence of keys, or to repeat the sequence each time a given key is pressed. You can then create as many of the recorded macros as you wish and save them in the folder where you installed the program. KeyMacro is also able to create keyboard shortcuts for files. You can define a keyboard shortcut for a single file, or for multiple files (by selecting the files using the context menu or by dragging them on the window). KeyMacro is a really handy utility for quickly creating macros that you can use to perform complex tasks in Windows, using the keyboard instead of the mouse. Functionality:

- User has the flexibility to create macros of up to 20 keystrokes. The maximum number of recorded macros that can be saved in the current version is 500.
- The macros created can be then saved and can be recalled later from the Macros list.
- The recorded macros can be then be recorded again and again.
- The recorded macros can be then played using any command and can also be recorded again and again.
