# **\*\*Web Graphics Tools\*\*** In a typical web design, graphics are reused in multiple places on a page, requiring their own unique file. The PNG and JPEG image formats were designed to save time, but they have become the de facto standard for image formats for web use. Earlier versions of Flash contained a graphics "file cabinet" where you created graphics assets for Flash animations. The more recent (3rd party) Flash CS4 version includes a "canvas" where you create graphic assets. You can use these in Flash animations as well as the web. As you design web pages, you will find yourself creating graphics for screens, logos, and HTML elements like buttons. All of these can be saved as PNG or JPEG files and reused on future pages. Figure 4-1 shows a sequence of web graphics that I created in both Photoshop and Illustrator. **\*\*Figure 4-1 The main design elements in a web**

Q: Protected ActivityHandler overrides I'm using the security feature of Android and would like to know if what's happening is some kind of override when a new key is pressed. From this link I understand that if the app receives a new keystroke but they haven't been registered then the framework calls the protected ActivityHandler. protected void

```
onWindowFocusChanged(boolean hasFocus) { if (hasFocus && isActivityKeyNeeded()) {
```

```
keyDown(KeyEvent.KEYCODE_DPAD_LEFT); } } From what I understand the framework calls isActivityKeyNeeded() to check if the current activity has been registered to handle the new keystroke. Is this check important? Could it raise alarms about potential security issues? A: @zp007 and @knoldsen are correct.
```

This has to do with how long a window can be blocked before it is considered a dialog, but there is nothing inherently wrong with the way it is implemented. The activity's onWindowFocusChanged is triggered when the window focus changed and whatever key was pressed is echoed out before the window even receives focus (that is to say that if there was any input made the window was forced from focus even though it was initially set on focus). Stephen A. Smith explains why it's crucial that the team fully understand the impact of losing Robyn in the Falcons' win over the Eagles. (1:31)

FLOWERY BRANCH, Ga. -- Atlanta Falcons coach Dan Quinn believes Robyn Houghtaling was likely paralyzed from the waist down when her car left the road and crashed into a tree, leading to the death of her fiancé, Laremy Tunsil, who was sitting next to her. Atlanta police said Houghtaling and Tunsil were driving on a northwest Atlanta road Saturday night when they apparently drove off the road and into the tree. Tunsil died at the scene, and Houghtaling was airlifted to the hospital. Quinn said Sunday he has "tried to process" what happened. Tunsil was a senior offensive tackle and a preseason All-American who was considered the favorite to win the Outland Trophy, given to the nation's best interior lineman. The family of Tunsil is not commenting on his death.

PSD files are great and offer more editing power, but their standard.PSD extension can hinder your editing workflow. There are many file types used in Photoshop. However, the most common one is.PSD. In fact, Photoshop comes with a standard “PSD filter” that converts almost all file types into.PSD images. The PSD filter converts.PSD files into a.PSD image, and retains all layers and options of original image. Can be applied to any of your editing projects. Allows you to create new documents in any type of files. Offers maximum editing power. PSD filters work with all Photoshop version and do not require additional plugins. We’ll have a look at each of these file types and what the PSD filter does, and how to apply it to any project. PSD (Photoshop Document) PSD files are the original graphics formats that Photoshop comes with. You can create these files using a variety of applications including Adobe Illustrator, InDesign, and
