Author Martin Milner Download ROSA Media Player 3.3.3.0 Review ROSA Media Player is a software program that helps people play video and audio files, create playlists, look for subtitles online and the list goes on. The installation process is uneventful and after you are done with it, you are met with a clean interface. It is only comprised of a few buttons, a menu bar and a window where to display the video feed, and thus is accessible to all user types, regardless of their previous experience

with computers. This program supports a long list of audio and video files, out of which we mention AVI, MPG, 3GP, DIVX, MP4, MOV, FLV, OGG, WMV, SWF, RM, M2TS, MP3, OGG, WAV, AC3, and FLAC. Also, playlists can be opened, in formats such as M3U, PLS, and M3U8. The audio and video configurations can be tinkered with, in the sense that you can change the dimension of the feed, add several types of filters (noise reduction, auto-detect face, post-processing etc.), rotate the picture and adjust the contrast, brightness, color, saturation and gamma levels. Moreover, you can change the audio channels, delay the sound and access an equalizer. Subtitles are automatically detected and displayed or you can upload them from the HDD, in SRT, SUB, SSA, TXT, SMI and RT formats. It is also possible to search for some on the Internet, namely on the OpenSubtitles.org website. This tool does not burden the system's resources, the picture

quality is quite good, yet capturing video feed from the Internet does not always work. All in all, ROSA Media Player proves to be an efficient piece of software, with many useful options, an intuitive interface and a good response time. ROSA Media Player is a software that can be used to play audio and video files, watch video on the Internet, create playlists, look for subtitles online and even provides a good search feature. ROSA Media Player is a free media player for Windows, which allows users to play, convert, record, synchronize, stream, search and burn media files. The program is also a standalone application, meaning that you can run it on your computer without having to install anything else. If it seems like a lot, it is, and there are enough things to do to get things done. However, most of them are fairly simple and once you get the hang of it, you will figure out how to accomplish all of these tasks quickly. You can use it as a video player, if you want to play a video file. You can convert video files to multiple formats, such as MP3, MPEG, and WMV. You can also split them into parts and extract certain frames from them. There are different filters in the program, which allows you to apply them to the video feed, in order to

improve the quality of the picture. ROSA Media Player is able to upload files and record on-the-fly video. Using its auto-detect features, this software will detect the video feed automatically. It is also able to stream live video from a webcam. There are two ways to stream live video from a webcam: either from your microphone or from the webcam card. The most stable streaming method uses the microphone, while the least stable ones use the webcam card. While in the “temporal editing” mode, you can adjust the frame rate, the size and the quality of the video. You can record video feed in different formats, such as DV, MPEG4, VHS, SVCD, DVD, VCD, DAT, MP3, WAV, AVI, AC3, OGG, FLAC and WMV. The recorded files can be burned on a CD-R or DVD-R to be played in a regular CD or DVD player. If you want to make an audio CD, you can record an audio file and burn it to a disc. You can burn audio CDs in MP3, MP4, OGG, AAC, AAC+,

FLAC, VOC, WAV, WMA, CDA and MIDI format. The audio files can be burned on a normal CD or a music CD to be played in a regular CD or DVD player.
