AutoCAD, now in its 19th major release, is the leading commercial desktop CAD/drafting program. As of 2018, AutoCAD has more than 2 million registered users, most of them working at the design stage for large-scale projects such as buildings and mechanical systems. AutoCAD stands for "automated computer-aided design," and AutoCAD LT stands for "line technology." Both AutoCAD and AutoCAD LT are designed to create two-dimensional (2D) and three-dimensional (3D) models of architectural, mechanical, electrical, civil, and other types of design drawings, and to prepare mechanical, electrical, and infrastructure drawings for use by contractors, construction project managers, and others. AutoCAD can also import and export 3D objects and models, and can print and publish 2D and 3D models, drawings, and layouts. AutoCAD has many built-in features, such as automatic dimensioning and completion, multiuser or collaborative environment, integration with Microsoft Office, and a wide range of drawing components. A more recent version of AutoCAD is available as a cloud service on the AutoCAD 365 subscription model. This version allows users to access AutoCAD content from any web-enabled device (PC, tablet, or smartphone), allowing them to work on the cloud when out of the office and to work on any device in any location. AutoCAD online offers continuous access to AutoCAD software and content, allowing you to work on projects at any time, from any location. You can work on the same project from many different devices or locations, and instantly share the latest changes in your projects with others. AutoCAD 365 also includes the Revit Architecture and MEP (Mechanical, Electrical, and Plumbing) cloud app, an integrated data model, and a range of intelligent design capabilities that will help you to achieve your project goals. The following are some of the most important features of AutoCAD and AutoCAD LT: AutoCAD • B.I.S.S. (Bottom-up Structure System) - The B.I.S.S. model simplifies the geometry and structure of a building. It creates a truss structure that can be used as a foundation for the entire model, or can be used individually to support a roof, walls, or structural components. • CAD (Computer Aided Design

File saving Drawings can be saved to disk in AutoCAD and other file formats such as DWG, DXF, SVG, EMF, 3DS and more. DWG files can be saved to disk in many formats, including standard, native and text formats. 3D files can be saved to the native file formats of the 3D graphics driver being used, such as ASN, OBJ and PLY. Collaboration AutoCAD can be used as a distributed design tool. Two or more designers may each have AutoCAD, and work together on the same drawing or design. With the ability to work with others on drawings (revisions), they may send and receive drawings or parts of a drawing to each other. Drawing creation Automatic creation of layouts in DesignCenter, based on a drawing or model created elsewhere. The same drawing may be used with different layouts. DesignCenter is also capable of importing many file formats, including the native file formats of 3D graphics drivers, such as 3D Studio Max, Maya, 3D Studio, and Open Asset Import Library (3D Studio MAX and all versions of 3D Studio MX) and older version of 3D Studio MAX. Image capture AutoCAD can capture and display the user's actions on a screen, making it easy to create a dynamic graphic, such as a hand sketch. As input, AutoCAD uses graphics tablets, digital pens, and the user's voice to capture what the user is doing, like sketching, writing, signing or drawing. This is also a built-in feature. Functions AutoCAD®'s product line includes specialized applications that are used in the industrial design process. Most are available in Windows, macOS and Linux versions. 3D Drafting and Visualization AutoCAD 3D, CADD AutoCAD Architecture AutoCAD Electrical AutoCAD Civil 3D AutoCAD Fabrication AutoCAD Graphics AutoCAD Land Survey AutoCAD Mechanical AutoCAD Plant 3D AutoCAD PLM AutoCAD Structural AutoCAD Templates Autodesk MotionBuilder Autodesk Revit Web-based Add-on applications AutoCAD Exchange Apps Autodesk Diag Autodesk Design Review Autodesk Sandbox Autodesk Scene Autodesk 3D City Autodesk Caddie Autodes ca3bfb1094

A pilot study of functional electrical stimulation (FES) training of the hand during intensive exercise in post-polio patients. This study investigated the use of functional electrical stimulation (FES) to improve upper extremity strength, functional mobility and hand dexterity in subjects who had had polio as children. A pilot study of FES training of the hand was conducted in two post-polio subjects to assess the response to a simulated but intensive rehabilitation program. A quadripolar electrode cuff was applied over the brachioradialis muscle of the non-paretic arm. FES was applied to the paralyzed hand for 1h per day for 4 weeks. Outcome measures included upper extremity strength, motor function and dexterity. The results indicate that FES is an effective approach to training the non-paretic arm in post-polio patients. It may be useful in optimizing patients' rehabilitation.The tRNA-aminoacyl-tRNA synthetase complex: reconstitution and characterization. The activities of different aminoacyl-tRNA synthetases were measured in a wide range of concentrations with synthetic tRNA3'(2')-Ile-UAU in the presence of ATP, GTP, PPi and Mg2+ using either a high-salt or a low-salt technique. The reactions were measured in terms of the amounts of Ile-AMP formed with time. Using the high-salt technique, the activities of valine and isoleucine synthetases were found to be about 1.7 and 3.0 micromol/min/mg, respectively, which are not in good agreement with the concentrations of these enzymes in the cell. The activities of alanine and lysine synthetases were found to be about 1.1 and 1.3 micromol/min/mg, respectively, which are also not in good agreement with the concentrations of these enzymes in the cell. Using the low-salt technique, the activities of valine and isoleucine synthetases were found to be 1.4 and 1.7 micromol/min/mg, respectively. The activity of lysine synthetase was reduced to 1.1 micromol/min/mg, and that of alanine synthet
