Although the main purpose of AutoCAD Architecture is to create engineering and architectural models, AutoCAD Architecture can also be used for advanced model-based drafting, visualization, and design. For example, it can be used to create wireframes and visualizations of building floor plans or structural models, and to create graphical mockups and renderings. It also includes tools that can be used to create and modify industrial and building databases. AutoCAD Architecture is available as a free download for architects and engineers, as well as for building and home owners.
