Secum Sino in English Published 4 January 2015 Introduction

Continuing my research on modern Chinese fiction, I'm writing this as part of a larger experiment in how to analyze the use of the "lǜ" (律), "xìng" (兴) and "hòu" (后) in 21st century Chinese, where to a certain extent the use of the classical term "lǜ" (律) seems to be falling out of favor. This is an issue because "lǜ" (律) can be a very nuanced term that is easily misunderstood by a Westerner unfamiliar with the classical Chinese poetic tradition. It is also a difficult term to use in contemporary English. In this paper, I will consider some examples of how the "lǜ" (律) can be problematic in 21st century Chinese fiction. As part of this project, I'll be writing this introduction/outline of the paper multiple times, and updating it as I go along. (Most of the examples I've collected are about novels, but for a host of other uses, you can see a full list on this page). So what is "lǜ" (律), anyway? 1. Lǜ was a very basic rime unit in all forms of Chinese verse. The modern form of lǜ (律) comes about a result of rime retreating in northern Mandarin Chinese, as it does across the continent. Vowel segments here become more like the vowels in modern Cantonese than in Standard Mandarin. This includes that it also loses the distinction between front and back vowels that was preserved in ancient forms. "lǜ" (律) is one of the basic units of Chinese verse. Attuned to the original pronunciation of Mandarin Chinese, instead of the pronunciation of Mandarin Chinese very late in its development, which seems to happen in other countries (e.g. that the modern French pronunciation of "chef" is closer to the original pronunciation than "chat"). This creates a word in which the rhymes that have fallen away are more basic than in the original rhyme scheme. The result are words and graphs that record the original rhyme system even when that system was
