"Mordenkainen's grand adventures 2nd was one of the best fantasy role-playing games back when it came out, and now it's back in a completely new edition!" —SEGA ★ A Beautiful World and Classic "Adventure" RPG The Lands Between is a world that begins once the moon rises. In this world, life and death are intertwined. In the real world, the sun sets after a day of work, but in the Lands Between, it never sets. The sun that rises in the real world rises in the Lands Between as well. This cycle repeats again and again. This world also has an anomaly created by an ancient civilization: the Elden Ring, which remains embedded in the sky. The Lands Between is a world of a living illusion. This game offers an atmosphere that feels like a classic RPG. ★ New Play Styles and Game Mechanics The game has been updated with new gameplay mechanics that have never been seen in a fantasy RPG. You can now choose from new battle styles, enhance your stats, and even use powerful magic that fights alongside your sword. ★ New Character Voices and Drama Music You can experience the story of Mordenkainen's grand adventures in a brand new voice. Be sure to listen to new characters, NPC, and monsters. Moreover, the game features a new drama written by the Japan-based writer Mutsuki Mitsumatsu, who is well known for the Monogatari Series. ★ Completely New Story Returning in this adventure is Mordenkainen's grand adventures 2nd Players take on the role of protagonist or party leader Mordenkainen. He is a disciple of the legendary wizard Ivalaina. You can enjoy the story of the Lands Between for yourself, or listen to a new voice. Some scenes have been entirely re-drawn to give them a brand-new feel. "Made by and for fans of classic fantasy RPGs, MORDEKAINEN'S GRAND ADVENTURES 2ND 2 will be an RPG that turns the typical fantasy-RPG setting on its head." ※SUGGESTED SYSTEM: PlayStation®4 computer entertainment system ※Due to region restrictions, the price of this downloadable content (for non-PlayStation®4 users) is the equivalent to: 3,000 yen Please note the price, and

**Fate Bound**

**Fate Bound (iOS) from Happinet**

**Fate Bound (also known as Waku Waku Kenjinkai, etc.), an action RPG set in the world of the visual novel "Waku Waku Kun." In Fate Bound, the world is divided into eight countries based on color and has flourished and expanded its territory. Despite its progress, a secret incident occurred 200 years ago, in which the king of the 1st country disappeared, and the remaining countries each put themselves up for a price to get a little bit of the power of the king to regain the throne. Now, six heroes have each been assigned to one of the five Kingdoms and are fighting for the throne while simultaneously vying to ally with the 6th Kingdom to gain the most powerful allies. As you progress and complete the main story, you'll naturally be drawn into the conflict between the kingdoms.**

**Due to the strong popularity of one of the visual novels created in the world, Fate Bound was created and launched on Steam in July 2014. We've previously translated Fate Bound and even previewed it, in which we gave a sample of the opening story. Your comments will be useful for us to improve ELDEN RING game in the future.Q: Conda count all installed base packages In a current project, we're about to upgrade our software toolset, and we want to make sure our pipeline will be able to run new environment versions (i.e. new version of base with newer packages) from any given point of time. Obviously, we're only interested about the base (or the minimal as base) package of which a given environment is built, and we're also interested in about all packages installed in that base. Our current toolset, that we're about to replace, has a lot of environment-specific stuff in it and that we'd want to make sure our pipeline will be able to run from any given point of time. Are there tools already available that we could use to get such information (packages installed in a given base)? A: In plain bash, after installing Python, you can do the following to list the versions of all of the base packages: $ conda list -c defaults|awk '{printf "%s ", $1}' numpy 1.17.1 scipy 1.1.0 scikit-learn 0.19.0 seaborn 0.10.0 matplotlib 3.0.2 pandas 0.25.3 ipython 7.8.0 tqdm
