huge investment to repair them, but i am not alone. you may find that your cracks need a deep and expensive repair, while many other people may want a low-cost and simple repair. in this section we will analyze the different components in your crack repair kit, and discuss why you need to purchase at least some of the additional components in your kit.

erosion cracks and fissures: the concrete crack repair kit consists of a lot of different components to ensure that the crack is taken care of in a safe and effective manner. it starts with the erosion anti-seepage injection. the purpose of this injection is to eliminate the water and air below the crack to prevent the cement from drying out. once the injection is cured, the crack repair cement will be applied to fill the crack and ensure a strong crack repair. the cement is the component that actually provides the crack repair. it is made from a proprietary blend of portland cement with a high alkalinity to ensure that the cement will not

shrink, settle, or crack. it is also designed to cure at or below the temperature of the concrete and prevent the formation of cracks from cracking. the color of the cement is provided to prevent the cement from settling once the crack is repaired.
