I had no problems upgrading from CS5 to CS6. I do not use the "smart" preview mode (I never did), by using the "regular" preview mode and opening PSD files I noticed no slow downs. I also like the improvements in the content aware tool.

I edited some PSDs in LR 5.2. I could not get PSD files to open in LR 5.2, but instead had not problem opening them in CS6. One PSD that did not work in LR 5.2 (both PSD and LR 5.2), had an issue with opening the.psd file. I should have opened the file in PS I think. But it was not an issue. Other than this one issue I liked both versions. I had no problem opening.psd files with both 5.2 and CS6. In CS6, I am not using the smart preview, but use the regular preview mode. As I said, I had no problems with this. I do believe that the PSD and LR are on par now. I have not noticed any difference in performance, but maybe need to use LR more.

Good luck!

Pat I did not have an upgrade issue with CS6 from CS5, except one conf. When I tried to save a subsection of an incredibly complex layered PSD - I had a huge performance issue and I was on a 20Gbps network - and realized that the Cloud Documents from CS5 were incompatible with the PSD format of CS6. I had to file a minor issue with Adobe to change the format so that it works. Once this was in place, no additional work was necessary. It took a few minutes to update every file.

I can create a picture collage, either digital or paper, and then edit the type of paper I want to use. I can save for both web and print. When it comes to memory and performance, it's important to stress that what's important for one computer user may be completely irrelevant to another. Any type of user who buys a computer based on price, appearance or limited features will likely be limited in their demand for computer memory. To keep costs down, manufacturers usually aim to keep computers as small and light as possible. Lower-than-required memory is what leaves a computer feeling sluggish -- even when a computer is equipped with the memory it needs. **What It Does:** This tool can be used to change colors straight from the image to the desktop or to add downloadable items.
