The new Lens Blur effect adds a number of common creative effects that can be applied by simply picking the effect. A variety of low-cost or free filters plus brighten, desaturate and sharpen tools are also included in the new vehicle-to-vehicle component. Photoshop is a desktop tool with advanced capabilities to create outstanding images, animations, videos and other productions. To meet the needs of today's diversified production workflow, the new desktop application includes convenient online features, such as being able to quickly edit and manage photos and designs from your smartphone or other mobile devices. Adobe Photoshop features a set of broad, consistent SDKs that allow a developer's creativity to flourish. Many Adobe Photoshop libraries can be accessed from any language. Today we're announcing four new libraries for JavaScript, Swift, Java and C++

developers. For Java language users, the new SDK supports all of the major development platforms, including mobile, desktop, and cloud. For Swift and C++ developers, the graphics and media development libraries can be used to develop unique applications or add powerful photo- and video-based features. SAN FRANCISCO--(BUSINESS WIRE)-- The Adobe® Business Apps Convergence event was a celebration of technology and innovation inside the Mobility World. The keynote by Dr. Susan C. Matthew-Dyvick, CIO at Adobe, brought together a leading technology team and gathered leading mobility application experts to learn about the convergence of mobility, business technology, and people's work. Forty-three discrete strategies were discussed, focusing around four key themes:

In a world where collaboration is increasingly necessary, Photoshop CC enables all users to enjoy extended coauthoring features without having to install software on other computers. With the new High-Performance Sync feature, users can work alongside others from an iPad or iPhone as if they were right on their local desktop or laptop. Whether they're editing a picture or creating a presentation, high-performance syncing lets multiple users work on the same document simultaneously on different Macs, Windows PCs, iOS devices or Android phones. And with the addition of templates for Adobe Stock, users can easily submit images to Adobe Stock and have a professional-looking repository from a single button. All images submitted to Adobe Stock, with the exception of Adobe Creative Cloud-only folders, are automatically deleted after 30 days. The flagship Adobe Photoshop desktop application adds breakthrough features powered by Adobe Sensei AI. Most of the content editors' Altimeter workspaces, including Recomposition, which lets users easily remove unwanted elements from their images, have been moved to the Content panel, while adjustments such as Crop, Gaussian Blur, and the recently released One-Touch Lens Correction have been added to the Lens panel. Additionally, the homonymous Filters panel now hosts eight neural-based filters that improve the performance and quality of Photoshop's most common image editing tasks. Real-time collaboration is also enhanced with new online doc commenting features and the ability to comment on images in the browser. These new features are all part of the Creative Cloud Libraries feature, so users can view and access their shared Content libraries from anywhere in the world. Under the hood, the library content sync system, which supports more than 150 different file formats, is now twice as fast as the previous version."
