Adobe's cc system is unique, among the major photosharing services, in that it allows one to rent a collection of photos by the hour, rather than a share that is only accessible to their owner. The advantage is that you don't need to worry about extra sharing rate fees associated with a non-registered account, and can take advantage of the paid collections hosted at sites like Vectortone. The various site collections can equally be accessed on home computers, mobile devices, and print kiosks. The collections can be downloaded onto multiple computers, too, or simply viewed for free online. Adobe's Photoshop is extremely popular these days, and is at the forefront of photo editing software technology. There are "premium" editions as well as Adobe Photoshop Free, and the Premiere elements are all on how to master your digital file types, how to make panoramas, and on exports. Photoshop Elements should be considered as a nice all-in-one bare-bones version, but for anyone who needs a plethora of amazing filters and Photoshop plugins, it's expensive. Photoshop is an eight volume for every PC user, and the fourth volume is usually just covering animations or "Photorealistic" filters. Imagine that when you go to the branch closest to you, you have to tell the attendant which application you are seeking, then wait for an employee to scan the code from your badge, then watch as they pass your name and a scanning ticket to you. That's Adobe's "blockchain" experience. When a new feature comes out, the previous user — or really the last user to do anything with the feature — is contacted. They install the update and their old data and work files are wiped from their computer, and a new set of templates and working files are uploaded. In the course of two or three months, you will be given a new number to call, and will then be shuffled onto an entirely new training and support team. You don't have to call them when new features and upgrades are updating, you just... wait ... for months. That is not a good sign.
