#2 Creative Cloud: As I said in the previous entry, I plan to upgrade my CC account if the number of updates and new features they have been releasing quick enough. It is amazing that they started off with a 1-year subscription, and released the new features in about 3 months. It is difficult to tell how intuit and intuitive CC is going to be, but it is free to try and extensive to boot. So, by the time it comes to a decision, I will know what I am doing. Not to say that I am not buying anything from CC when it is released on a wider platform. **#3 Advanced Creation Tools**: The main problem with Photoshop CC is that the free version does not include everything in Photoshop. To be fair, I have not extensive experience with Photoshop CS6 and CC, but I think that the workflow is quite different between the two versions. There will be other versions of the software, but my advice is to use the CS6 version, or FW 8.0.3 as you call it, which supports the latest version. This is the latest closed beta release of CS6, which also has the re-designed interface. With CS6, all references to CC have been removed from Photoshop, so that it is no longer a CC product. Disappointing, but I am sure that it is a sensible business decision. Still, I will miss some of the extra tools and features. There are also new Photoshop features on the way in regards to AI. It looks like that the old AI that was introduced in CS5. One of the features that holds Photoshop back from even coming close to Mac (and other Windows) photo editing, out of the box, is the trouble with the number of available options. If you want simple tools for basic tasks, as the name would suggest, Photoshop Elements is a better choice.
